none = no lapse/floor (−∞ if any observed choice has p = 0) lapse = (1−λ)p + λ/K, λ = 0.05 floor = p clipped at 1e-12
Bayesian-Threshold-PS δ: none 0.26 (combo-r fit; agg-LL undefined), lapse 0.44, floor 0.435. combo-r / marg-r are shown for the lapse variant; they differ by ≤ 0.007 across variants except Threshold-PS (combo-r 0.355 under none, δ = 0.26).
